The Office of the Human Resources Professional

Suncor Energy

P.O Box 2844, 150 – 6th Avenue SW

Calgary, Alberta, T2P 3E3

Dear Sonja Burgher,

I am excited to apply for the Geoscientist opportunity with Suncor Energy. I recently completed my Master of Engineering in Geomatics Engineering at the University of Calgary, where I developed strong experience in environmental GIS, geospatial analysis, technical reporting, spatial databases, and analytical workflows supporting environmental and infrastructure-focused projects.

What particularly attracts me to this role is the opportunity to contribute to environmental monitoring, reclamation support, and multidisciplinary geoscience initiatives within one of Canada's leading energy organizations. My background combines analytical problem-solving, environmental spatial analysis, technical visualization, and data-focused engineering workflows that align strongly with the collaborative and technically driven nature of this position.

Throughout my academic and technical project work, I completed environmental GIS applications involving spatial interpolation, greenhouse gas emissions mapping, transportation analysis, and environmental visualization using ArcGIS and Python-based analytical workflows. I also completed projects involving geospatial data mining, spatial databases, clustering analysis, and QA/QC-focused analytical processing requiring structured data interpretation and technical reporting.

In addition to technical analysis, I have experience supporting geospatial workflows involving spatial QA/QC, database organization, technical documentation, and stakeholder-ready reporting outputs through internship and independent project work. These experiences strengthened my ability to work collaboratively, adapt quickly, and communicate technical information clearly across multidisciplinary environments.

While my background is rooted primarily in geomatics engineering and geospatial analytics, I am highly motivated to continue growing within environmental and geoenvironmental systems work. I am particularly interested in contributing analytical, GIS, and technical problem-solving skills to support Suncor's environmental characterization, monitoring, and reclamation initiatives.

Thank you for your time and consideration. I would welcome the opportunity to further discuss how my engineering background, environmental GIS experience, and analytical mindset can contribute to Suncor's geoscience team.

Sincerely,

Chisom Victor Onyeukwu
