The Office of the Talent Acquisition Team

Esri Canada

Bay Adelaide East, 8 Adelaide Street West, Suite 200

Toronto, ON M5H 0A9

Dear Hiring Team,

I am excited to apply for the Engineering, AI & Data New Graduate opportunity with Deloitte Canada. I recently completed my Master of Engineering in Geomatics Engineering at the University of Calgary, and I am particularly interested in this role because it combines technology, engineering, analytical problem-solving, and collaborative transformation work across multidisciplinary environments.

My background combines engineering systems thinking, software-oriented problem-solving, technical visualization, automation workflows, and analytical project experience. Through both academic and independent projects, I have worked with Python, SQL, JavaScript, HTML/CSS, GIS technologies, automation workflows, and interactive digital systems to develop technical solutions, process data, automate workflows, and communicate insights effectively.

One of my strongest recent projects involved the development of an interactive geospatial portfolio system integrating responsive frontend behavior, animation systems, filtering workflows, fullscreen interactions, and mobile-compatible layouts. I also completed analytical projects involving Python-based clustering analysis, spatial databases, geospatial automation, and structured data processing workflows requiring problem-solving, validation, and technical documentation.

In addition to technical capabilities, I bring strong adaptability, interdisciplinary collaboration, and communication skills developed through engineering, technology, and creative systems work. I enjoy learning new technologies, solving technical challenges, and working collaboratively to build systems that are both functional and user-focused.

What attracts me most to Deloitte is the opportunity to contribute to impactful engineering and transformation projects while continuing to grow across cloud technologies, software systems, automation, and technical consulting environments. I am excited by the opportunity to work alongside multidisciplinary teams solving complex business and technical problems through innovative engineering solutions.

Thank you for your time and consideration. I would welcome the opportunity to further discuss how my technical background, adaptability, and problem-solving mindset can contribute to Deloitte's Engineering, AI & Data practice.

Sincerely,

Chisom Victor Onyeukwu
