Calgary, AB T2E 8A2

Re: Junior GIS Analyst - Infrastructure, Calgary

Dear Minja Schmelzl,

I am excited to apply for the Junior GIS Analyst position with Klohn Crippen Berger's Infrastructure team in Calgary. I recently completed my Master of Engineering in Geomatics Engineering at the University of Calgary, where I developed strong experience in GIS workflows, spatial databases, Python-based geospatial analysis, infrastructure mapping, cartography, and technical reporting.

My background combines academic geospatial analysis with practical infrastructure and GIS support experience. During my GIS and geomatics internship with VICDANPEE PLC, I contributed to geospatial data collection, coordinate verification, feature digitization, attribute standardization, and infrastructure mapping workflows supporting utility and transportation-related projects. I also supported field data capture, spatial documentation, and technical reporting processes in fast-paced engineering environments.

At the University of Calgary, I further strengthened my technical GIS and analytical skills through applied geomatics and spatial analysis projects involving spatiotemporal traffic hotspot detection, environmental GIS, spatial databases, spatial data mining, Python-based geospatial automation, and geospatial visualization. These projects required data cleaning, spatial analysis, GIS visualization, database querying, and the communication of technical findings through stakeholder-ready mapping outputs and reports.

In addition to my technical GIS background, I bring strong visual communication and documentation skills developed through multidisciplinary creative and digital projects. This combination allows me to produce not only technically accurate spatial outputs, but also clear and visually effective deliverables for project teams and stakeholders.

I am particularly interested in KCB because of the company's collaborative approach to infrastructure, engineering, environmental services, and geospatial problem-solving. I would welcome the opportunity to contribute my GIS, spatial analysis, technical communication, and analytical skills to your Infrastructure team.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my background and interdisciplinary experience can support KCB's geospatial and infrastructure projects.

Sincerely,

Chisom Victor Onyeukwu
