## **The Office of the Hiring Managers**

Esri Canada

12 Concorde Place, Suite 900

Toronto, ON M3C 3R8

## **Dear Hiring Managers,**

I am excited to apply for the GIS Developer position with Esri Canada. I recently completed my Master of Engineering in Geomatics Engineering at the University of Calgary, where I developed experience in geospatial analysis, spatial databases, Python-based geospatial automation, GIS workflows, and interactive technical visualization systems.

My background combines geomatics engineering, geospatial data analysis, and software-oriented problem-solving. Through my academic and independent projects, I have worked with ArcGIS Pro, SQL, Python, PostGIS concepts, JavaScript, HTML/CSS, and geospatial processing libraries to build analytical workflows, automate spatial processes, and develop user-focused technical outputs. I am particularly interested in the intersection of GIS, spatial data systems, automation, and interactive web-based visualization.

One of my strongest projects involved the spatiotemporal analysis and hotspot detection of Calgary traffic incidents using KDE, DBSCAN, HDBSCAN, and Python-based geospatial workflows. I also completed projects involving spatial databases, environmental GIS, geospatial automation, and responsive interactive portfolio development integrating animated UI systems and technical storytelling principles.

In addition to technical GIS and analytical experience, I bring strong visual communication and interface design instincts developed through multidisciplinary digital and creative projects. I enjoy building systems that are not only technically functional, but also intuitive, visually organized, and user focused.

What particularly attracts me to Esri Canada is the company's leadership in geospatial innovation and the opportunity to contribute to scalable GIS solutions that support real-world decision-making. I am eager to continue growing as a GIS developer while learning from experienced professionals and contributing my technical, analytical, and creative problem-solving skills within a collaborative development environment.

Thank you for your time and consideration. I would welcome the opportunity to further discuss how my background and interdisciplinary experience can contribute to Esri Canada's GIS development team.

Sincerely,

**Chisom Victor Onyeukwu**
