Calgary, AB T2C 5A4

Re: Geotechnical Engineer in Training

Dear Hiring Team,

I am writing to express my interest in the Geotechnical Engineer in Training position with Global Engineering and Testing in Calgary. I recently completed my Master of Engineering in Geomatics Engineering at the University of Calgary, and I bring hands-on experience in field survey support, infrastructure documentation, spatial data QA/QC, technical reporting, and engineering-support workflows.

Although my academic background is in geomatics rather than civil or geological engineering, my training has given me a strong foundation in measurement systems, coordinate control, field data collection, spatial analysis, data accuracy, and technical documentation. These skills align closely with the practical demands of site investigations, construction reviews, inspections, data management, and formal reporting.

In previous project and field-support work, I have collected, organized, and validated infrastructure-related datasets, prepared GIS-ready records, supported technical documentation, and produced clear reports, maps, and visuals for engineering and environmental contexts. I am comfortable working with Microsoft Office, Adobe Acrobat, GIS tools, AutoCAD exposure, and structured data workflows. I also bring strong communication, organization, and problem-solving skills, along with a willingness to learn directly from experienced engineers in the field.

What attracts me to Global Engineering and Testing is the opportunity to grow with a Calgary-based consulting team that values technical quality, safety, sustainability, and professional development. I am especially interested in contributing to site investigations, construction documentation, data analysis, inspections, and report preparation while continuing to build my geotechnical engineering knowledge.

I hold a valid Canadian driver's license, have access to a personal vehicle, and am available for in-person work in Calgary. I would welcome the opportunity to discuss how my geomatics, field documentation, data analysis, and technical reporting background can support your team.

Sincerely,

Chisom Victor Onyeukwu
