The Office of the Talent Acquisition Team

Super.com

260 Queen Street West, Unit 400

Toronto, ON M5V 1Z8, Canada

Dear Hiring Team,

I am excited to apply for the Data Analytics Intern position with Super.com. I recently completed my Master of Engineering in Geomatics Engineering at the University of Calgary, where I developed strong experience in data analysis, Python-based analytical workflows, SQL querying, technical visualization, and structured problem-solving. I am particularly interested in this opportunity because it combines analytical thinking, data storytelling, business insight generation, and collaborative problem-solving within a fast-paced technology environment.

My background combines engineering analysis, technical visualization, automation workflows, and data-focused project experience. Through both academic and independent projects, I have worked extensively with Python, SQL, data cleaning workflows, clustering analysis, geospatial databases, and structured reporting systems to organize, analyze, and communicate insights from complex datasets.

One of my strongest recent projects involved the spatiotemporal analysis of over 51,000 Calgary traffic incidents using Python, KDE, DBSCAN, HDBSCAN, and temporal analysis workflows to identify recurring patterns and spatial hotspots. This work required large-scale data cleaning, analytical processing, visualization, validation, and stakeholder-ready reporting. I also completed projects involving SQL-based spatial databases, geospatial automation workflows, and interactive visualization systems emphasizing usability and clear data communication.

In addition to technical analytical skills, I bring strong adaptability, curiosity, and interdisciplinary problem-solving abilities developed through engineering, technology, and digital systems work. I enjoy learning quickly, working collaboratively, and translating technical findings into clear and actionable insights that support decision-making.

What particularly attracts me to Super.com is the company's fast-moving and data-driven culture, collaborative environment, and emphasis on growth and innovation. I am excited by the opportunity to contribute analytical thinking, technical skills, and a strong learning mindset while continuing to grow within a product and business-focused analytics environment.

Thank you for your time and consideration. I would welcome the opportunity to further discuss how my analytical background, technical experience, and problem-solving approach can contribute to Super.com's data team.

Sincerely,

Chisom Victor Onyeukwu
