The Office of the Talent Acquisition Team

Suncor

P.O Box 4015, Main Mailroom, Tar Island

Fort McMurray, Alberta, T9H 3E3.

Dear Hiring Team,

I am excited to apply for the Technologist position with Suncor at Base Plant in Fort McMurray. I recently completed my Master of Engineering in Geomatics Engineering at the University of Calgary, and I am particularly interested in this opportunity because it combines field monitoring, infrastructure support, technical data analysis, surveillance workflows, and multidisciplinary operational collaboration.

My background combines geomatics engineering, field survey support, infrastructure documentation, GIS workflows, technical reporting, and analytical problem-solving. Through both field and technical support roles, I have assisted with topographic measurements, control point verification, spatial data validation, field documentation, and monitoring-related workflows supporting infrastructure and utility projects. These experiences strengthened my attention to detail, technical organization, field adaptability, and ability to work within structured operational environments.

In addition to field-related experience, I have developed strong analytical and data-handling skills through geospatial and engineering-focused projects at the University of Calgary. My academic work included spatial databases, environmental GIS, geospatial automation, transportation analysis, and technical reporting workflows requiring data validation, anomaly identification, analytical troubleshooting, and organized documentation practices.

I am particularly interested in Suncor because of the company's strong operational culture, emphasis on safety, and commitment to technical excellence and employee development. I would welcome the opportunity to contribute my field support, monitoring, data organization, GIS, and analytical skills while continuing to grow within a large-scale operational and geotechnical support environment.

I am comfortable working in field-based and rotational environments, collaborating with multidisciplinary teams, and adapting to evolving operational priorities. I would appreciate the opportunity to further discuss how my technical background and problem-solving approach can support Suncor's dyke performance and monitoring operations.

Thank you for your time and consideration. I look forward to hearing from you.

Sincerely,

Chisom Victor Onyeukwu
