Re: Geotechnical Engineer in Training — Req ID 1005551

Dear Adrien,

I am excited to apply for the Geotechnical Engineer in Training position with Stantec in Calgary. I recently completed my Master of Engineering in Geomatics Engineering at the University of Calgary, and I am particularly drawn to this opportunity because it combines field investigations, construction reviews, engineering analyses, technical reporting, and multidisciplinary infrastructure work that directly contributes to local communities.

My background combines geomatics engineering, field survey support, infrastructure documentation, GIS mapping, spatial data QA/QC, and technical communication. Through my field survey and infrastructure support experience, I assisted with site layout, control point verification, field measurements, topographic data collection, progress documentation, and as-built infrastructure records for civil and utility projects. These responsibilities strengthened my attention to data accuracy, field coordination, technical documentation, and practical site workflows, which I understand are important foundations for geotechnical field and construction review work.

In addition to field-based support experience, I have developed strong analytical and reporting skills through GIS and geospatial data projects. I have supported spatial data maintenance, coordinate checks, map production, data cleaning, and technical visuals for infrastructure, environmental, and transportation-related datasets. At the University of Calgary, my academic projects included environmental GIS, spatial interpolation, traffic incident analysis, spatial databases, Python-based geospatial automation, and technical reporting workflows requiring careful validation, problem-solving, and clear communication of technical findings.

What stands out to me about Stantec is the company's collaborative culture, emphasis on mentorship, and commitment to impactful infrastructure and environmental projects. I would welcome the opportunity to learn from senior geotechnical engineers while contributing my field support, geomatics, GIS, technical reporting, and analytical skills to your Geotechnical Engineering & Materials Testing team.

Thank you for your time and consideration. I would appreciate the opportunity to further discuss how my background and interdisciplinary experience can support Stantec's projects and team environment.

Sincerely,

Chisom Victor Onyeukwu
