Minja Schmelzl

Talent Acquisition Specialist, EMIE Business Unit - Business Operations

Klohn Crippen Berger Ltd.

7315 8 St NE

Calgary, AB T2E 8A2

Canada

Re: Junior GIS Analyst - Infrastructure, Calgary

Dear Minja Schmelzl,

I am excited to apply for the Junior GIS Analyst position with Klohn Crippen Berger's Infrastructure team in Calgary. I am currently completing my Master of Engineering in Geomatics Engineering at the University of Calgary, and I bring a combined background in GIS, spatial analysis, infrastructure support, field data collection, Python, SQL, spatial databases, and technical communication. KCB's work across engineering and environmental services strongly aligns with the kind of geospatial work I want to grow into: accurate spatial data, high-quality GIS figures, clear reporting, and practical mapping solutions that support real project decisions.

My experience fits closely with the responsibilities outlined in the posting. During my GIS and geomatics internship with VICDANPEE PLC, I supported geospatial data collection, coordinate verification, feature digitization, attribute standardization, and infrastructure mapping for utility assets, road corridors, and power distribution networks. I also worked as a Field Survey and Infrastructure Support Technician in Lagos, where I supported site layout, control point verification, field measurements, topographic data collection, field logs, and as-built documentation. These experiences helped me build the discipline needed to collect, organize, validate, and communicate spatial information with accuracy.

At the University of Calgary, I have continued to strengthen those skills through applied geomatics and GIS projects. My academic work includes spatiotemporal traffic incident analysis in Calgary, environmental GIS and spatial interpolation, spatial databases and data mining, Python-based boundary simplification, and 3D spatial data capture with point cloud modeling. These projects required me to gather and clean datasets, apply spatial analysis methods, prepare map-based outputs, document workflows, and translate technical results into clear visual deliverables. I am comfortable working with ArcGIS Pro, QGIS, SQL, Python, Jupyter/Google Colab, spatial databases, raster/vector analysis concepts, and Microsoft Office tools.

I would bring KCB a strong learning mindset, attention to detail, and a practical blend of GIS, programming, field-support, and visual communication skills. My creative background supports the GIS work in a practical way: better map layout, clearer technical figures, stronger presentation design, and more readable documentation. I am especially interested in contributing to GIS figures for environmental and engineering reporting, spatial analysis for

project deliverables, web mapping support, data collection workflows, and collaborative work with project teams across offices. I am available for the Calgary hybrid work model, open to remote collaboration, and willing to relocate as required.

Thank you for considering my application. I would welcome the opportunity to discuss how my GIS, geomatics, and technical communication background can support KCB's Infrastructure team and contribute to high-quality project delivery.

Sincerely,

Chisom Victor Onyeukwu
